

Automation & Integration Services

Allied Controls' specialists implement their knowledge of the latest control technologies to provide automation solutions that are innovative and cost-effective to make your factory run more efficiently. Allied is based outside of the metropolitan St. Louis, Missouri region, and we specialize in smaller manufacturers/OEMs who need to design machinery to operate in a larger manufacturing environment. Allied can get your machinery to interoperate with your end-customer's current system or can design a solution for you internally.

From a simple relay logic panel, to a large SCADA based control system, Allied can tackle the job and do it in a cost-effective manner. Allied firmly believes that relationships with their customers is a partnership more than anything else. Let us sit down with you and see what Allied can do to help satisfy your automation needs.

As a small company with low overhead, Allied Controls can provide Industrial Controls for your company at a very competitive price. Contact one of the owners listed below for further information.
